

New journals for your physical science researchers

Researchers working at the frontiers of circular chemistry and light–matter science now have dedicated publishing homes, and we wanted to make sure you're aware before your faculty are.

Cell Press has launched two new journals in physical science: *Chem Circularity*, the first dedicated to circular chemistry and materials systems, and *Matter & Light*, a new home for light–matter interface research.

Both are now available to your institution on a complimentary basis, giving your researchers early access as these communities grow.

Chem Circularity is the first journal specializing in the shift from linear to circular thinking across chemistry, materials science, engineering, and environmental science. From renewable feedstocks and critical mineral recovery to circular economy policy, it gives researchers working across these disciplines a single, rigorous home.

Matter & Light brings together the fragmented light–matter research community — spanning photonics, photovoltaics, photochemistry, optoelectronic materials, and smart optical devices — under one Cell Press peer-review process.

If you have any questions about these journals or subscription options, please contact your account managers or click the button below to fill in the form.

Complimentary access is available through 31 December 2026. Please share the news with relevant research groups.

Best regards,
